

# THE IT MANAGEMENT CLOUD

The single system  
of record for hybrid  
IT operations.

## Simplicity. Efficiency.

You've heard it before, but you've never seen it like this. OpsRamp's IT Management Cloud gives you the control you need to manage your modern hybrid IT environments and make your team an asset to your business.

The OpsRamp SaaS platform supports all your digital transformation initiatives today and tomorrow.

## Make Change Work For You:

- 01 **SHARED SERVICES:** Streamline your IT organization by centralizing tasks like monitoring, alerting, patching and automation across the enterprise.
- 02 **CLOUD MANAGEMENT:** The OpsRamp platform drives efficiencies at scale, whether you're starting your cloud journey or all-in-the cloud.
- 03 **DEVOPS:** Monitor, manage and maintain what your developer teams build and run in a single platform.

## Stop managing infrastructure. Start delivering value.

With OpsRamp, your IT team won't need to play catch-up on a laundry list of tasks like aggregating point tool metrics, tracking system health or monitoring applications one-by-one. It starts with our secure IT operations hub, that centralizes information, tasks, dashboards and more. From there, streamline your IT operations with five comprehensive services:

**ASSET MANAGEMENT:** Dynamically discover, manage and optimize all of your hybrid IT assets. Then, make decisions on procurement, inventory, service contracts and budgets.

**AVAILABILITY & PERFORMANCE:** Monitor any IT element in your hybrid environment with application and infrastructure monitoring, service maps, dashboards and historical data.

**PROACTIVE CARE:** Build standardized configuration and patch management processes to pre-empt failures and mitigate risk.

**AUTOMATION:** Free up time by automating routine IT maintenance tasks and enable consistent execution at scale.

**REMOTE CONTROL & COMPLIANCE:** Centralize the management of your IT environment with secure remote consoles, audit recordings, and a built-in credentials store.

## All integrations are welcome

The best part? If you've got point tools that you love, OpsRamp works with them too. Your IT environment won't change. It'll only get better. Our integrations with a broad range of IT management tools deliver complete visibility into your IT environment, without disrupting your current workflows.

## Don't just improve. Transform.

It's time to change how your IT team works, by changing what it does. You need industrial-grade simplicity combined with business-transforming efficiency. And OpsRamp delivers everything you've wanted from IT management, but have never gotten.
